

THE cKc PEN-KNIFE

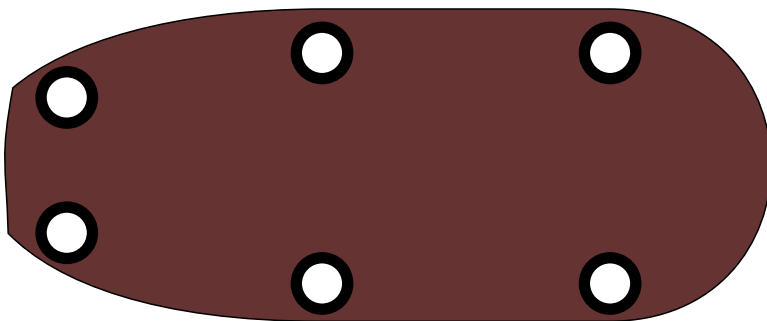

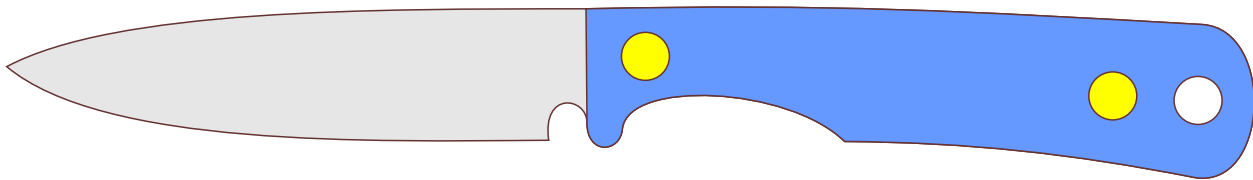

This is NOT a hardcore knife. this is not a beat-up the world knife. It is also not a self-defense knife.

This is a SlimLine neck knife for doing the daily chores in life. When you know you've got some heavy Duty Back-up blade and you want small to be small.

Ground from 2mm Thick AEB-L Stainless Steel. This is an ultra-fine grained steel designed specifically for the scalpel and razorblade industry. Hardened to 60RC this will take a fine edge and be easy to sharpen.

The Spearpoint tip will offer a fine controlled piercing point suitable for pulling splinters, and opening packages. Will also make light work of food prep.

Comes with a Kydex Neck Sheath.

The NEW cKc Pen Knives

cKc Pen Knife Version 1, and Considered Version2. Version 2 is more appropriate for wood carving and that type of stuff with a fuller handle and slightly smaller blade. I have found nothing wrong with the original, but the new designs slightly shorter blade will enhance detail work. The Fuller handle and larger throat area will provide greater torque, and with a full thickness handle it will also provide a more hand filling grip for power cuts. This is still intended to be a small workhorse and does not have an overly long handle. the current model prototype is already a high performer. the new handle will deal more work.
